## Summary

---

Over 2 years of experience participating in the design and implementation of web and backend applications. Focused on best practices, code optimization, and collaborative work in agile environments.

## Education

---

**Universidad Tecnologica Nacional(UTN)**, BS in Information systems engineering – Mar 2024 – present  
Caba,Argentina

- Experience developing applications using multiple programming languages and paradigms
- Trained in system analysis, design, and development following software engineering best practices

## Projects

---

**AcadifyApp** Oct 2025 – Dec 2025

CorrelatiApp is a web application that helps university students organize, visualize, and optimize their academic journey. It enables users to explore degree curricula across institutions, navigate course requirements, and track their progress through a personalized dashboard.

- Fullstack development using Go, Gin, Gorm, Next.js and Tailwind CSS
- Implementation of a scalable architecture with clear separation of concerns.

**chatApp** Mar 2026

Real-time chat application featuring servers, rooms, and granular permission management. Built with Go, PostgreSQL, WebSockets, and Next.js, the system supports scalable, low-latency communication and structured community interactions.

- Designed scalable system architecture to handle concurrent users and real-time events.
- Backend developed in Go with a focus on performance and concurrency.

## Skills

---

**Languages:** Go, TypeScript, SQL, C

**Frameworks and Libraries:** Node.js, Next.js, React, GORM, Tailwind CSS, Prisma

**Databases:** PostgreSQL, MongoDB, MySQL

**Tools and DevOps:** Git, Makefile, Supabase, Docker
